

Colas Rail will be present at the InnoTrans show in Berlin from September 20 to 23, 2022

Messe Berlin GmbH – Expocenter, Hall 5.2, Booth 330

From September 20 to 23, Colas Rail will present its expertise in sustainable mobility solutions at the InnoTrans show in Berlin, the leading international trade fair for railway infrastructure. The stand will be dedicated to demonstrating its expertise, tools and machines to support its stakeholders on turnkey projects in the construction, renovation and maintenance of their rail infrastructure projects.

In line with its CSR ambitions and its will to move up the value chain, Colas Rail is emphasising its expertise in sustainable mobility solutions to support its stakeholders and thus promote transport solutions that provide responses to environmental challenges.

September 20

Colas Rail will begin the event with a presentation of its ambitions in terms of reducing its carbon footprint. This will be an opportunity for the company to also unveil its new identity with the evolution of its signature, “On track for a sustainable future”, reflecting its commitment to a sustainable future. The new Colas Rail corporate film will be screened, illustrating the Colas Group's culture, centered on people and built around the values of caring, sharing and daring, as well as its capacity for innovation.

September 21

Colas Rail will highlight, in particular, its intelligent rail transport system solutions, its turnkey green hydrogen production and refueling station offer with modeling through Building Information Modeling (BIM), and its expertise in system integration.

September 22

Colas Rail will present the "green track" (grassed surface proposed in urban tram transport projects) and smart level crossings. On the same day, the Colas Flowell technology, the first active road marking using high-visibility LEDs, will also be exhibited on the stand, as well as Mobility by Colas solutions, a range of tailor-made services for smart and connected mobility.

Innovation will also be at the centre of the conference, organised from 3 p.m. to 4 p.m., at the Speaker Corner, on the Ecostop. The “start & stop” locomotives and heavy plant engine system for a sustainable railway industry will be presented by Christophe Bellon, Equipments Deputy Director.

In addition, throughout the duration of the show, our Human Resources teams will be available to visitors through recruitment sessions between 9-9:30 am and then 2-2:30pm.

Finally, Colas Rail will take advantage of Innotrans to formalise its partnership with Railsponsible, an initiative focused on responsible purchasing, which will thus improve our sustainable development practices throughout the supply chain of our projects.

About Colas Rail (www.colasrail.com)

Colas Rail, the railway subsidiary of the Colas Group, participates in the design, financing, and project management of the major transport infrastructures (track works, overhead lines, signalling, ventilation, smoke extraction, command-control, freight, etc.) in France and on international markets through its projects and specialised businesses. Colas Rail, which has a workforce of 5,600, boasts 12 different areas of expertise and represents 28 subsidiaries/offices worldwide. The company posted turnover of €1.12 billion in 2021, of which 68% produced internationally.
